What's inside

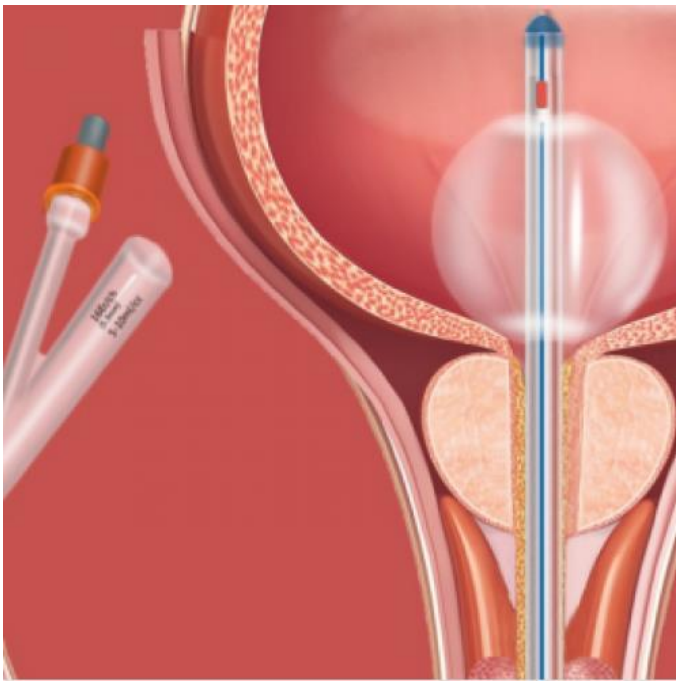

Introduction 1

Silicone Foley Catheter 2-3

Silicone Foley Catheter with Temperature Sensor 3-4

Prostate Silicone Foley Catheter 4

Suprapubic Silicone Catheter 5

Silicone Foley catheter, as an important medical instrument, plays multiple roles in urinary management, such as drainage of urine, assisting clinical diagnosis, and protecting urinary organs. It provides an effective solution for patients who are unable to urinate on their own, helping them regain a comfortable and healthy life. With the continuous progress of medical technology, it is believed that silicone Foley catheters will play a more important role in urinary management in the future.

For years, providing products to help improve patient safety and comfort has been at the heart of what we do. BOENMEED team is committed to helping provide solutions for more positive patient outcomes. You will find comfort in knowing that we provide a full assortment of silicone Foley catheters, ensuring to effectively meet the needs of various situations and procedures.

Silicone Foley Catheter

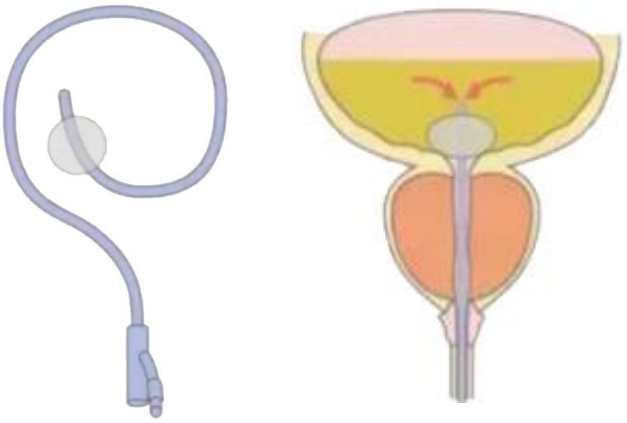

Cat.No. 140201-140217

Silicone Foley Catheter (two-way/three-way)

Silicone Foley catheter is a semi-flexible tube inserted into the bladder through the urethra to drain urine.

• Made of 100% medical-grade silicone, with excellent biocompatibility, flexibility, and resistance to encrustation, less likely to destroy surrounding tissues, or cause allergy and tissue irritation. Which reduces the risk of complications and discomfort for the patient.
• Equipped with an inflatable balloon at the tip to keep the catheter in place.
• Radiopaque tip and contrast line
• Round head with bullet shape
• Clear design of the body and funnel allows to see potential blockage.
• Color coding, easy to identify size
• The three-way catheter adds a rinsing chamber.

Silicone Foley Catheter

Cat.No. 140201-140217

Cat. No.	Size (Fr)	Qty/case(pcs)
2-way Catheters with Balloon

Silicone Foley Catheter with Temperature Sensor

Silicone Foley Catheter

Cat.No. 140201-140217

Silicone Foley catheter with temperature sensor is similar to a standard Foley silicone catheter, this type includes a built-in temperature sensor. The sensor allows for continuous monitoring of the patient's body temperature via the urinary tract. Which can be particularly useful in critical care settings where continuous monitoring is necessary.

Cat. No.	Specification	Qty/Case (pcs)
141601	Silicone Foley Catheter with Temperature Sensor， Fr 8	240
141602	Silicone Foley Catheter with Temperature Sensor， Fr 10	240
141603	Silicone Foley Catheter with Temperature Sensor， Fr 12	240
141604	Silicone Foley Catheter with Temperature Sensor， Fr 14	240
141605	Silicone Foley Catheter with Temperature Sensor， Fr 16	240
141606	Silicone Foley Catheter with Temperature Sensor， Fr 18	240
141607	Silicone Foley Catheter with Temperature Sensor， Fr 20	240
141608	Silicone Foley Catheter with Temperature Sensor， Fr 22	240
141609	Silicone Foley Catheter with Temperature Sensor， Fr 24	240
141610	Silicone Foley Catheter with Temperature Sensor， Fr 26	240

Prostate Silicone Foley Catheter

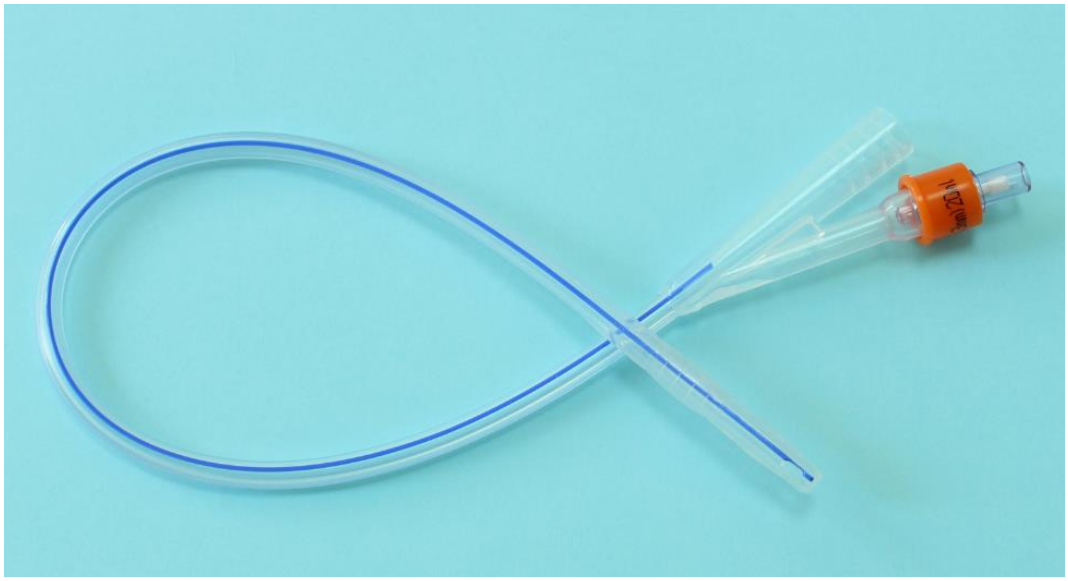

Prostate silicone Foley catheter is specifically designed with a curved tip to navigate around the obstruction caused by an enlarged prostate gland. It allows for proper drainage of urine from the bladder in patients with benign prostatic hyperplasia (BPH) or other prostate-related conditions.

140218	Fr16	500
140219	Fr18	500
140220	Fr20	500
140221	Fr22	500
140222	Fr24	500
140223	Fr26	50

Silicone Foley Catheter

Cat.No. 140201-140217

Suprapubic Silicone Catheter

Unlike silicone Foley catheters inserted through the urethra, suprapubic silicone catheters are surgically inserted directly into the bladder through a small incision made in the abdominal wall just above the pubic bone. Suprapubic silicone catheter is used in cases where long-term urinary drainage is needed or when urethral catheterization is not feasible or advisable.
